

## **Map/Reduce in the cloud ...**

Test Map/Reduce with the Amazon Elastic Compute Cloud (Amazon EC2) service. Also, get a general idea about EC2 and related services.

For a reasonable testing, you may need to adjust your implementation and/or your input data from the last assignment. Try different setups and document performance.

Work again in teams.

Please contact me if you experience any problems!

Note that the service is commercial. However, the total costs should be in the range of only 1-2 dollars ..... don't forget to ask me for a refund! ;-)

Please submit your tested implementation together with an experience report and performance comparisons until Tuesday, June 29 via E-Mail.
